Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: .these specifications. For more detailed design data for timber the values of The American Railway Engineering Association as quoted for railway work shall be used. These values will be found in table V of the Structural Engineers Handbook by Ketchum. 274. Allowable Loads on Piling.--All piling driven by drop hammer shall develop the bearing capacity as called for in the contract or on the plans but in no case shall this be less than 10 tons per pile. The bearing capacity shall be determined by the Engineering News formula: $2 \times W \times H \div P = S + 1$ in which S + 1 P is the safe load in pounds, W =weight of hammer in pounds, H =height of the free unretarded fall of hammer in feet and S =the penetration in inches under the last blow assumed to be sensible and at an approximately uniform rate. The bearing power shall be based on a 12 foot drop of the hammer. When piles are driven by steam hammer, no reliance will be placed on formulae for bearing capacity but the contractor shall be required to rig up a free falling hammer meeting the requirements for drop hammer as per Article 59 of these specifications and he shall determine the penetration and depth necessary to secure the required bearing power by means of this drop hammer apparatus on the first and last pile driven in each footing and on intermediate piling if so requested by the Engineer, it being...
