The theory of R-trees is a well-established and important area of geometric group theory and in this book the authors introduce a construction that provides a new perspective on group actions on R-trees. They construct a group  $RF(G)$ , equipped with an action on an R-tree, whose elements are certain functions from a compact real interval to the group  $G$ . They also study the structure of  $RF(G)$ , including a detailed description of centralizers of elements and an investigation of its subgroups and quotients. Any group acting freely on an R-tree embeds in  $RF(G)$  for some choice of  $G$ . Much remains to be done to understand  $RF(G)$ , and the extensive list of open problems included in an appendix could potentially lead to new methods for investigating group actions on R-trees, particularly free actions. This book will interest all geometric group theorists and model theorists whose research involves R-trees. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Hardcover.
